HONEY LOCUST

New Thornless, Seedless

As many of you know, we are constantly looking for something new and better in Shade Trees. We believe we have found it in this new Honey Locust. In fact, it is so new it hasn't been named. We have seen most of the newer Honey Locusts and this one is superior. The tree is more shapely in growth, the leaflets are much larger and a dark green. For a fast-growing tree of spreading habit, we recommend it highly; 6-8 ft., \$9.00 each.
